ANÁLISIS DE PERFORMANCE

Clase 32. Programación Backend

por Marcos Solis Santiago

ANÁLISIS DE PERFORMANCE

INSTRUCCIONES

Sobre la ruta '/info', en modo fork, se agrega y extrae un console.log de la información colectada antes de devolverla al cliente. El child_process de la ruta '/randoms' estará desactivado.

Obtener:

- 1) El perfilamiento del servidor, realizando el test con --prof de node.js. Análisis de resultados después de procesarlos con --prof-process.
 - Extraer reporte con los resultados de utilizar como test de carga Artillery en línea de comandos emulando 50 conexiones concurrentes con 20 request por cada una en archivo de texto.
 - Emulando 100 conexiones concurrentes en 20 segundos con Autocannon en línea de comandos, extraer un reporte con los resultados.
- 2) El perfilamiento del servidor con el modo inspector de node.js --inspect. Revisar el tiempo de los procesos menos performantes sobre el archivo fuente de inspección.
- 3) El diagrama de flama con 0x, emulando la carga con Autocannon con los mismos parámetros anteriores.

Incluir en este informe sobre incluyendo los resultados de todas las pruebas realizadas y la conclusión obtenida a partir del análisis de los datos.

PERFILAMIENTO DEL SERVIDO CON -- prof DE NODE.JS

Comandos del análisis:

[root@DESKTOP-0PD4IF7 LOGGERS-GZIP-Performance_analisis]# node --prof main.js

[root@DESKTOP-0PD4IF7 LOGGERS-GZIP-Performance_analisis]# artillery quick --count 50 -n 20 "http://localhost:8080/info" > result_clg-on.txt

[root@DESKTOP-0PD4IF7 LOGGERS-GZIP-Performance analisis]# artillery quick --count 50 -n 20 "http://localhost:8080/info" > result clq-off.txt

Resultados del análisis:

result clg-on.txt:

PERFILAMIENTO DEL SERVIDOR CON NODE JS --INSPECT

Comandos del análisis:

[root@DESKTOP-0PD4IF7 LOGGERS-GZIP-Performance_analisis]# node --inspect main.js
Debugger listening on ws://127.0.0.1:9229/1fd6bf63-8d96-43a7-b379-fc38889efce7
For help, see: https://nodejs.org/en/docs/inspector
{"level":"info","message":"PID worker: 5539 - Server mode: FORK, listening at: http://localhost:8080"}
Debugger attached.

Resultados del análisis:

EL DIAGRAMA DE FLAMA CON OX

CONCLUSIÓN

Las pruebas de performance nos brindan herramientas útiles para conocer el tiempo que tarda en ejecutarse una aplicación. Conocer esto nos dará una perspectiva más amplia de la eficacia de la ejecución de la misma y los puntos en los que refactorizar sería una opción útil para su desempeño.
